MAIN LINES OF RESEARCH

Genetics applied to male infertility.

Male fertility preservation in oncological patients

Optimisation of preimplantation genetics diagnosis and in vitro fertilization techniques.
Clinical research into new surgical procedures, drugs and medical devices applied to andrological diseases and conditions (male sexual dysfunction, hypogonadism, Peyronie disease, premature ejaculation, sexually transmitted diseases).

SCIENTIFIC CHALLENGES

Our multidisciplinary team of professionals develops translational research in the field of diagnosis and treatment of andrological disorders. To improve our knowledge and thereby improve healthcare for patients, we seek to continue active projects, develop new lines of investigation, increase the number of international publications, train professionals and enhance collaboration with hospital and university groups inside and outside the IIB Sant Pau.
COLLABORATIONS WITH IIB SANT PAU GROUPS

- Nephrology Group
- Urology Group
- Gynecological group

EXTERNAL COLLABORATIONS

National collaborations
- Medical and Molecular Genetics Centre (RI)-IDIBELL: genetics applied to infertility.
- Cellular Biology and Medical Genetics Unit-UAB: preimplantation genetic diagnosis techniques.

International collaborations
- Mario Serio Experimental and Clinical Biomedical Sciences Unit, University of Florence: genetics applied to male infertility.
- Reproductive Genomics Laboratory, Human Genetics Centre (KU Leuven): genetics applied to male infertility.
- New England Research Institutes: hypogondadism.
- European Academy of Andrology: radiology examinations of the male genital tract.

Private collaborations
- Participation in clinical studies including clinical trials and postauthorization studies sponsored by national and international pharmaceutical companies.
